

OPEN SCIENCE BARCAMP & FESTIVAL 2026

October 2026 will bring the open science community together in Delft for two inspiring events hosted at Delft University of Technology.

Open Science Barcamp

On Tuesday 13 October 2026, the OSC-NL Barcamp 2026 will kick off with a full day dedicated to peer exchange and open dialogue, with pizza included. Unlike a traditional conference, the Barcamp has no predetermined programme: participants shape the agenda together on the day

itself. Previous editions featured discussions on topics such as generative AI for research summaries, citizen science, institutional support for open science, and bridging the gap between researchers and data professionals. More than 100 open science enthusiasts are expected to attend this year.

National Open Science Festival

The following day, on Wednesday 14 October 2026, the National Open Science Festival 2026 will take place at TU Delft. The festival is organised by and for the open science community and welcomes researchers and research support professionals from all disciplines. The programme will include interactive sessions, workshops, lightning talks, networking opportunities, posters, information stands, and other contributions.

Registration for both events is now open. In addition, participants are invited to submit proposals for workshops, talks, posters, networking sessions, or other activities for the festival. Participation is free of charge.

THE NETHERLANDS STRENGTHENS OPEN ACCESS LEADERSHIP WITH RENEWED STRATEGY

The Netherlands continues to be a global leader in open access publishing, with 95% of Dutch scientific articles published open access in 2024. At the same time, the rapidly evolving scholarly publishing landscape calls for an updated strategy. Universities of the Netherlands (UNL) has therefore renewed its open access strategy. This update is driven by new challenges such as the rise of artificial intelligence, issues

surrounding research integrity, increasing publication costs, and growing pressure on the quality and reliability of scientific output. The renewed strategy aims to build a more future-proof and fairer publishing system, with greater control over copyright and metadata, a more diverse and transparent scholarly communication landscape, sustainable publishing infrastructure, and stronger support for academic communities. It also places strong emphasis on transparency, accountability, and addressing perverse incentives in the publication system.

The strategy has been published via [Zenodo](#) and will be implemented in the coming years by a joint steering group involving universities and SURF. In addition, universities have begun discussions on the future culture of scholarly publishing, aligned with this renewed direction. You can read the full article by UNL [here](#).

RADBOUD UNIVERSITY SUPPORTS INITIATIVE FOR OPEN RESEARCH INFORMATION

BARCELONA DECLARATION ON OPEN RESEARCH INFORMATION

The Guild, the European network of research universities of which Radboud University is a member, has signed the Barcelona Declaration on Open Research Information: an initiative that advocates free access to information about scientific research.

The **declaration** was launched in 2024 and already has more than one hundred signatories, including universities, research funders, and scientific organizations worldwide. The initiative

focuses specifically on research metadata: the underlying information that records what is being published, by whom, and how everything is connected. This information forms the basis for bibliometric research, research evaluation, and policy-making, and is currently largely in commercial hands.

Less dependence on publishers for your own research data

When you publish an article, all kinds of information are recorded about it: who wrote it, where it was published, how often it is cited, and which project funded it. This information is currently largely locked within large commercial publishers. As a result, universities not only pay for access to articles, but also depend on companies for basic information about their own research. The Barcelona Declaration calls for research information such as who published what, where, and with which funding, to be freely available to everyone, and not used as a revenue model by publishers. For researchers, little will change in the short term. But it is a signal that the way we share and manage research information is gradually shifting, in a direction that gives researchers more control.

NEWS FLASHES

- Have you nominated an initiative for the **Leo Waaijers Open Science Award** yet? You have until 23 June 2026, before 14:00 CEST. For more information, click [here](#).
- Yesterday (28 May), we held our final **Open Science Community Meet-up** before the summer break at Cultuurcafé. Thanks to everyone who joined us this season. See you again after the summer!
- **On 10 June, the Research Institute for Medical Innovation organises Research Integrity Round #25**, focusing on Knowledge Safety & Open Science. The session explores how to balance open research collaboration with the protection of sensitive knowledge, data, and technologies. For more information and registration, see the [event page](#).
